

MicroAvionics Aero 300 GA Headset with ANR and Bluetooth

Experience exceptional clarity and comfort with the MicroAvionics Aero 300 GA headset, designed for pilots who demand the best. This super lightweight headset features an advanced electret noise-cancelling microphone, specifically engineered by MicroAvionics to eliminate unwanted ambient noise, ensuring crisp and clear communication even in the noisiest aircraft.

As with all MicroAvionics products, this headset comes with a UK manufacturer's warranty, supported by our dedicated team of engineers.

Our cutting-edge Active Noise Reduction (ANR) technology delivers up to 25dB of extra noise cancellation, effectively silencing the constant drone of the aircraft and allowing you to focus on what matters most. Control your experience with the sleek, low-profile handheld controller, offering easy access to volume, ANR, and Bluetooth settings.

The headset is built for comfort, featuring a deluxe faux leather headpad and ultra-low profile earcups with acoustic faux leather quiet comfort ear pads. The rotating microphone boom allows for flexibility, making it perfect for use in either the left or right seat.
